

Meet change with confidence

Your traditional financial management system locks you in to rules, structures, and business models that cannot evolve to meet changing needs. You constantly have to work around its limitations. It is time you got a solution that works the way you want it to. One where you can meet change with confidence and easily manage growth. That solution is Infor SunSystems from LAKE.

Adapt to change without changing

Traditional finance systems are normally based on complex segmented account codes that are difficult to maintain and change. SunSystems is different. It mirrors your organisation's business structure in a way that is easy to configure and extend.

Smart Transactions capture the detail you need up-front. With Smart Transactions you can realign analysis and reporting to meet evolving business needs and immediately see and report on any change you make.

With SunSystems you will be able to:

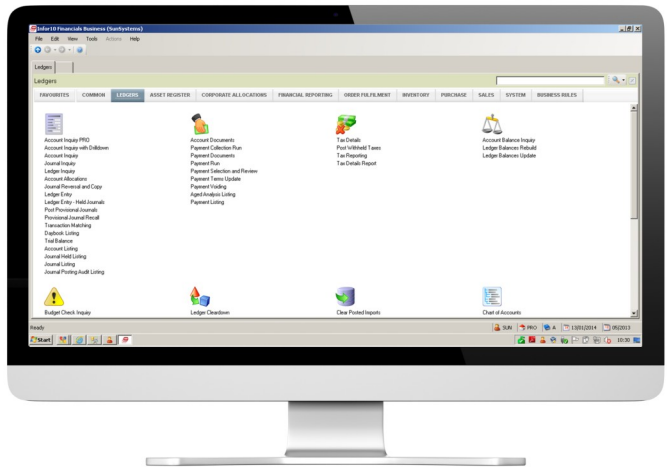

- Quickly incorporate new lines of business, organisational changes and acquisitions
- Ensure measurements and key performance indicators match the state of your business today
- Protect your investment for the future and limit reliance on IT for business-level needs

Get the information you need... fast!

With SunSystems you get fast, easy access to smart transactions that deliver not just data, but detailed information in a context that you define.

Integrate information

Imagine having all your ledger data in one place.

SunSystems combines information from your general, sales, purchase and user-defined ledger such as for projects, without having to wait for batch updates or reconciliations. You will be able to close your books faster, leading to lower costs and greater efficiency.

Improve corporate performance

Streamline reporting and planning cycles with a single, integrated environment. Plus, make it easy for users and stakeholders to understand how your business is performing with immediate reporting and analysis. Decision-makers will get immediate access to the integrated finance and operational information they need to better manage your business.

Increase information accuracy

Capture all the detail you need in the source system, and get a clear, complete view of your business from the very start. Finally, you can use spreadsheets as they were actually intended: to analyse the data in your system, not as an alternative place to store it. Because your financial information comes straight from the source, you can be confident it's accurate and up to date.

Grow in any market

LAKE

Leverage our experience

Whether growth means new markets, acquisitions, or products, you need to adapt and respond to unique requirements with ease and speed. A SunSystems solution from LAKE helps you improve financial management, streamline processes and implement more quickly... without breaking the bank.

Built-in expertise. LAKE is a specialist provider of financial management solutions based on Infor SunSystems with more than 20 years experience across a wide range of sectors.

Our experience includes Colleges, Not-for-Profit, Financial Services, Social Housing, Oil & Gas, Engineering, Retail and many more.

One solution for all your needs. Simplify system management, streamline processes, and make your business less complex with one solution that brings everything together across different sites, countries, business units, companies, and corporate offices—and is flexible enough to handle their varying requirements.

Provide a consistent and auditable environment. Comply with all statutory, audit, international and other regulatory requirements with built-in audit trails, alerts, and sophisticated data reconciliation. With SunSystems you will be able to handle simultaneous financial reporting requirements and close your books faster.

Customer Comment

The following reflect are some of the most common reasons given for selecting SunSystems.

“It is the flexibility that we like. We know we can do virtually anything that we want with it... report by recruitment team, contract, contractor, client, week or by internal business units”

Lorien Resourcing

“SunSystems has a number of advantages. Firstly, the flexible coding structure meets our needs now and can be easily adapted to meet future needs. Secondly, there is also a lot of flexibility in reporting; it is very easy to get information out. Thirdly, the unified ledger offers efficiency in removing duplication of entries and postings.”

Gwalia Housing

“SunSystems was chosen because of the complexity of our current business, our growth aspirations and the fact that it is used by so many of our peers in the oil and gas sector.”

President Energy

“SunSystems provides strong currency management, user friendly software, dynamic reporting; dynamic linkage to Excel, and all at a sensible price.”

Vantage Capital Markets

“Reporting was a key reason for choosing SunSystems. You can slice and dice the information as you see fit. And you don’t have to maintain long account codes to achieve the reporting you want.”

Haberdashers' Aske's Federation

Meet change with confidence

Take control now

Infor SunSystems is designed to support and reinforce best practice in financial management. With SunSystems you will be able to adapt to change without changing, get the information you need when you need it and grow in any market.

And SunSystems can be implemented quickly and easily, leading to fast return on investment and low total cost of ownership. Furthermore, the solution can be quickly adapted to support changes in financial processes and business operations.

With SunSystems you get everything you need to:

- Easily accommodate change
- Manage the expected and unexpected
- Concentrate on your business without worrying about systems
- Expand without having to add new systems
- Get up and running quickly in any market

- Comply with multiple regulatory and reporting requirements

Key Features

Analysis

- Smart Transactions enable a greater depth of analysis and a simpler, more intuitive Chart of Accounts
- You be able to realign reporting to meet evolving business needs and immediately report on any change you make

Reporting

- ad hoc or period end reporting can be completed in minutes
- Information can be produced in any form you choose. It can be spreadsheets or pdf documents delivered via email, via self-service dashboards or your SharePoint Intranet

Integration

- Seamlessly connect financials to your other organisational systems on premises or in the cloud
- Modernize your work environment and increase both efficiency and employee satisfaction with technologies like Mobility and Social Business

Adaptability

- More than 9,000 customers
- 20+ years financial experience built in
- Mirrors how you do business
- Powerful reporting tools
- Rapid return on investment

Procurement

Get web-based, end-to-end procure-to-pay capabilities that support centralised and decentralised purchasing, covering purchase requisitions, orders, contracts, receipts, and invoice processing and reconciliation.

Sales

Control the complete business process for receiving and processing customer sales orders, regardless of receipt method, from invoice generation and revenue recognition.

Performance

Reduce financial planning time by up to 70% and get access to information anytime, anywhere with fully integrated budgeting, planning, and forecasting tools.

Reporting

Automate the publication of reports and dashboards to give every manager up-to-the-minute and personalised access to key metrics. Produce reports and reporting packs in any number of formats in minutes rather than days or weeks.

Expenses

Cut the cost of processing travel and expense reports by up to 80%. Replace paper forms with easy to use electronic documents and workflow to streamline the process and provide full visibility of claims

Collect

Thoroughly analyse debtor days and cash flow to quickly identify offending debtors and track collections quickly and easily.

LAKE Implementation

LAKE consultants' knowledge of SunSystems and long experience of its use is fundamental to the successful delivery of quality customer solutions.

LAKE Hosting

LAKE Hosting solutions help customers control costs and keep to budgets. They provide consistent monthly IT and software usage costs.

LAKE Support

At LAKE we take the quality and responsiveness of our service extremely seriously, as it provides critical insurance for our customers' implementations.
